

BENEFITS OF MEMBERSHIP

- **Membership of an independent organisation with wide interdisciplinary interests and exposure** - through a non-aligned Foundation with multidisciplinary activities and membership, the capacity to link all major sectors in the coal, carbon, energy and related disciplines and related communities and, thereby, provide
 - Impartial and balanced views to government and others when called upon to do so, and
 - Multidisciplinary teams of experts when required for specific projects or activities.
- **Networking** – through **association** with key personnel and organisations in a wide variety of scientific, engineering, technical, financial, academic, and government-linked disciplines throughout the coal, carbon, biomass (renewable) and general energy industries in Southern Africa.
- **Maintenance of competitive edge** - through exposure to **conferences** and associated events, seminars, **courses**, special lectures/webinars, meetings with overseas specialists and **notifications** of tender advertisements, policy developments and research and development projects
- **Information** – through leading edge information contained in **publications**, including conference volumes (past and present), special subject publications and notifications and documentation from national and international organisations including the IEA, World Coal Institute and other international information and research centres
- **Communication** – though the circulation of **notifications** through the Foundation's extensive **database**, and information on the FFF Carbon **website**.
- **Education and Continuing Professional Development** – through a comprehensive matrix of postgraduate and in-service **courses** provided by accredited professional institutions and given by highly experienced lecturers, all aimed at the personal development of attendees in and across a wide range of coal, carbon, energy and related disciplines.
- **Career development** through **mentoring** and **association** with experienced members and peers in the coal, carbon, energy and related disciplines and related industries, and access to the information and database provided by the Foundation
- **Promotion of personal and corporate business opportunities** – through **exposure** of companies and individual professionals during technical events and though other forms of communication.
- **Representation** – through **membership** of the Foundation on other national and international professional bodies, councils, and associations, and through the **participation** and/or contribution of individual members on government-lead national and international initiatives, project teams, policy and strategy boards and related activities.
- **International coverage** – through **globally spread membership** of the Foundation, **links** to a number of international organisations and through regional and international **correspondents** and associates in far distant shores
- **Member services** – through benefits via linked associated organisations
- **Employment** – through a **strategic alliance** with industry, government, and tertiary institutions, thereby providing the opportunity to notify widely for the recruitment of people in the various sectors encountered in industry, government and tertiary institutions.
- **Reduced fees** for conferences, technical seminars, and other events - **through** membership of the FFF Carbon Foundation and its associated professional societies
